EUPEN.03/2018

Vendor Rating Award 2018

fedibel

On March 8, 2018, **fedibel**, the Belgian Federation of Electrical wholesalers, held its annual General Assembly followed by the Vendor Rating Award in the three categories : cable, lighting and electrical material.

The supplier evaluation includes the categories Product Coding & Database, Offers & Orders, Deliveries and Logistics and Management of Complaints and rates the performance of the suppliers during the past year 2017.

Kabelwerk Eupen AG is proud to announce, that it **won** the vendor rating in the **category cable**. It confirms that the long term commitment of Kabelwerk Eupen AG towards the satisfaction of its customers is well recognized and pays off. This is all the more pleasing as 2017 was a year of particular challenges with the introduction of the CPR (Construction Products Regulation). For Cables, it entered into force on June 10, 2016 and the one-year transitional period ended on July 1, 2017. From that date, manufacturers and importers were only allowed to place on the market cables meeting the new CPR Regulation for the applications concerned by the CPR.

Kabelwerk Eupen AG is one of Europe's leading companies in the field of cable production and is one of the very few which combines all its manufacturing processes at a single location in Eupen, Belgium. This gives a great flexibility at all stages of production, from design to the final inspection of the finished products. Kabelwerk Eupen AG offers a wide product range including but not limited to low and medium voltage power cables, safety cables, copper and optical fibre telecommunication cables, instrumentations cables, airfield lighting cables, railway signalling cables, cables for Nuclear Power Plants, coaxial cables and accessories for Mobile, CATV and Broadband networks, and many other special cables.
