

Kabelwerk **EUPEN** AG
cable

EUPEN.04/2017

**EUPEN extends its range
of coaxial 50 Ohm soldered
jumpers**

**Soldered jumpers available with
3/8" Hiflex cable**

EC2-50-HF (5082) coaxial cable

The 3/8" Hiflex 50 Ohm coaxial cable from Eupen offers an excellent solution for the base stations which require many short and **very flexible** coaxial links in a small space. Thanks to its **small size** (1 cm outer diameter) and its spiral-corrugated outer conductor, the 3/8" Hiflex cable accepts a minimum repeated bending radius of 2.5 cm, but still **provides a better attenuation than many ultra-flexible cables**.

Like the other 50 Ohm corrugated cables from Eupen, this cable is produced and tested in Eupen according to the highest quality standards.

7-16 and 4.3-10 male interfaces are available.

Eupen 3/8" Hiflex jumpers feature **very low VSWR and PIM, 360° soldering** and **IP68** watertightness. Furthermore, the optimized overmold provides an **excellent grip** for easy installation as well as a **robust** mechanical protection for the cable/connector junction.
