EUPEN.11/2016

## New coaxial interface 4.3-10

On September 6th 2016, the international standard IEC 61169-54:2016 edition 1.0 was officially published. This technical specification provides information relating to 4.3-10 series connectors. This new 50 Ohm coaxial interface, with 10mm inner diameter of outer conductor and an upper operating frequency limit of 6 GHz, is more compact than the usual 7-16 interface and requires a much lower coupling torque.

Eupen already has a whole range of 4.3-10 products available :

- soldered jumpers 1/2" Hiflex male straight and right angle
- soldered jumpers 1/2" Standard male straight
- soldered jumpers 3/8" Hiflex male straight
- hand-fit connectors 1/2" straight male and female
- torque wrench (for coupling nut)
- dedicated sealing systems.

More information such as technical specifications and installation instructions can be found on the website :

<http://www.eupen.com/cable/rf/index.html>

**EUPEN releases a whole range of coaxial products with the new 4.3-10 interface**
